

We're proud to support fire door safety week.

9 TOP TIPS

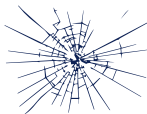

for checking your Fire Doors

CHECK THE DOOR

There should be **NO major defects** in the door leaves or frame.

CHECK THE GLASS

There should be **NO cracked or broken glass**.

CHECK THE SEAL

Seals should be in one continuous length around the doors and **should NOT be damaged**.

CHECK IT CLOSES

Self closing doors should close fully on their own, without binding on the floor. Door closing speed should be approx 10 seconds from a 90 degree angle. **The door should NOT slam.**

CHECK THE HINGES

There should be **NO visible wear** in the hinges – dark marks around the hinge knuckle could indicate wear.

CHECK THE HANDLES/LEVERS

Levers should return to their horizontal position after use and the latchbolt should **engage smoothly** and completely into the strike.

CHECK THE MAINTENANCE

Some hinges, closer arms and locks **might require lubrication**.

CHECK THE LEGISLATION

Ensure all mandatory **safety signs are displayed on each fire door**. Replace all parts like-for-like according to manufacturer's specification.

CHECK IT IS SAFE AT ALL TIMES

Fire doors should **NEVER be wedged open**.
